REPORT NO. 3124189CRT-001

SOUND ABSORPTION TEST ON
ACOUSTI-BOARD Ultra™

RENDERED BY MANUFACTURER AND RELEASED TO:

Acoustical Surfaces, Inc.
123 Columbia Court North
Chaska, MN 55318

INTRODUCTION

This report gives the results of a Sound Absorption test and the determination of the Noise Reduction Coefficient on ACOUSTI-BOARD Ultra™. The panels were selected and supplied by the client and received at the laboratories on April 12, 2007. The sample appeared to be in a new, unused condition.

AUTHORIZATION

Signed Intertek Quotation No. 500033342.

TEST METHOD

The panels were tested in accordance with the American Society for Testing and Materials designation ASTM C423-02, "Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method". The test was conducted using Type A Mounting as described in ASTM E795-05, "Standard Practices for Mounting Test Specimens During Absorption Tests".

GENERAL

This test method describes the measurement of sound absorption by analyzing the decay rate of sound in a reverberation room. The difference of the decay with and without the specimen in the room is utilized to determine the sound absorption of the specimen under test. Intertek Testing Services Acoustical Facilities utilizes a 16,640 cu. ft. (470 cubic meter) reverberation room.

An independent organization testing for safety, performance, and certification.

This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to copy or distribute this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program. Measurement uncertainty budgets have been determined for applicable test methods and are available upon request.

GENERAL cont'd

The sound absorption coefficient is ideally defined as the fraction of the randomly incident sound power absorbed by the material. The greater the coefficient, the greater the sound absorption.

The Noise Reduction Coefficient (NRC) is a single number rating obtained by taking the arithmetic average of the absorption coefficients at 250, 500, 1000, and 2000 Hz rounded to the nearest multiple of 0.05.

The Sound Absorption Average (SAA) is a single number rating obtained by taking the arithmetic average of the one-third octave bands from 200 through 2500 Hz rounded to the nearest 0.01.

DESCRIPTION OF TEST SPECIMEN

The test specimen consisted of 36 inch wide by 60 inch long by nominal ½ inch thick ACOUSTI-BOARD Ultra™, laid on the concrete floor of the reverberation room. The panels were butted together to make up the test specimen. They weighed 1.2 pounds per square foot.

REMARKS

1. Aging Period: None
2. Ambient Temperature: 69° F
3. Relative Humidity: 46%

CONCLUSION

The test method employed for these tests has no pass-fail criteria; therefore, the evaluation of the test results is left to the discretion of the client.

This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government

Date of Test: May 17, 2007
