THE WORLD'S BEST THERMAL, ACOUSTIC, PRESERVATION WINDOW INSERTS

CLIMATE SEAL WINDOWS IMPROVE HOME HEAT EFFICIENCY. ENERGY BILL DECREASES BY 40%!

I love the Climate Seal windows & brag/tell people about them and the improvement in my home heat efficiency every chance I get. The first month they were installed (January 2009), my energy bill decreased about 40%.

My home was built in 1920, old but not historic, but I do live in a historic area. Replacing the old, original windows was estimated at \$4,000 - \$25,000..... neither was satisfactory for me. After reading about the product & calling the local phone number for more answers..... I decided it was the perfect answer!

I "pop" them in for the winter months and store them in my basement for the summer months. They are light weight so I can do it myself. (I will be 70 years old next year) *I no longer have winter winds blowing through the curtains!*

As I said before, *I love my Climate Seal windows!! They make a vast difference in the efficiency of my beloved, older home!!*

Best regards,

T. Thompson
